This chapter reviews the fundamental principles of a theory of gambling. Gambling theory is primarily concerned with decision making under conditions of risk. The act of making a decision consists of selecting one course of action, or strategy, from among the set of admissible strategies. Review of The Theory of Gambling and Statistical Logic (Epstein . Gambling theory, then, is primarily concerned with decision making under conditions of risk. The making of a decision—that is, the process of selecting among n strategies—implies several logical avenues of development. One implication is the existence of an expression of preference or ordering of the strategies.
